

NCA-F Event 2:

Green Telecom: Green Premium or Green Savings?

Event Highlights

- **Name** : Green Telecom: Green Premium or Green Savings?
- **Date** : October 10, 2025
- **Venue** : Kesar Hall, Yashobhoomi, New Delhi

Objective:

To unpack whether going green in telecom means paying a “green premium” or unlocking real “green savings,” while exploring the funding, technologies, and policies that make sustainability profitable.

Brief:

This session will explore the real costs and benefits of green telecom. Do energy-efficient networks and renewable integration actually save money in the long run, or do they add extra expense up front? How can operators balance their climate commitments with profitability? Experts will share insights on smart funding models—like green bonds and blended finance—and showcase practical technologies that cut both emissions and costs, from energy-efficient radio networks to renewable-powered data centers. With supportive policies and the right strategies, green telecom can be more than a moral choice—it can be a smarter business decision.

Programme Details:

Date	Time	Event
Friday 18 Oct	1400- 1600	Green Telecom: Green Premium or Green Savings?
	Panel Members	1. Dr. M P Tangirala, Member (TRAI)
